

NetFrame

working title
Version 0.4

These rules set out a method of handling movement and combat between Mobile Suits. Win conditions and extra rules can be decided on a per game basis. Each player brings the same number of Frames, and a 20 card deck for that suit. With many players teams are recommended over battle royale due to the necessity of focussed attacks to actually kill anything, though the rules support either playstyle. All frames a player brings should be from the same faction.

1 The battlefield

The battle is fought on a hex-tri grid. Each frame has a hexagonal base that will occupy exactly 6 of the triangles on the grid. distances are reckoned from the edge of this base, everything is measured in steps of triangles - motion is between the vertexes of the triangles.

Distances

frame A is 3 away from both B and C

Line of Sight

frame A can see B and C but not D

frame A can see B and D but not C

frame A can see B, C and D

1.1 Terrain

It is highly recommended to add some terrain to the battlefield. Terrain blocks movement and line of sight. Terrain that can be stood upon is classified as being on different levels. Players should quickly agree at the start of the game what level each piece of terrain is, but as a quick rule of thumb, moving up one frame's height is roughly one level. The level indicates how much movement it takes to climb onto the terrain.

1.2 Line of sight

For a frame to be selected as a target of an attack, there must be a direct (i.e. no steps moving back) , unbroken (so it can't pass through terrain or other frame) path of steps less than or equal to the range between the edge of the attacking frame and the target.

Frames on the edge of their level are visible from other levels, and can see other levels, while frames one

or more steps away from the edge do not have LOS to other levels. Terrain that is less than 1 level high will still block line of sight (its assumed that the frames hide).

1.3 Objectives

Optionally, but again recommended, there can be a number of points on the battlefield marked as objectives. Whoever holds the most of these at the end is the winner. (Other mission types are easy to construct as desired)

2 Setup

Each player places their frame at the starting locations, shuffles the decks, and a player receives the priority marker.

3 Card anatomy

Initiative: 	Marks when the card will resolve. Higher numbers resolve before lower numbers
Movement: 	How much to add (or subtract if its negative) to the movement for the action with this card
Attack marks: 	How much damage to deal at this location if this attack hits (come in melee and ranged form)
Attack range: 	Range of ranged attack
Block mark: 	Region that this card can block for
Single use mark:	Indicates that the card is set aside and not shuffled back in after use.
Ability text:	Effects that happen when this card is played or resolved.
Type info: (bottom)	What type of card it is, and categorisation information. Used for deckbuilding.

4 The turn

On each turn of the game there are 3 phases: planning, action and cleanup.

4.1 Planning

in the planning phase, simultaneously for each frame 5 cards are drawn from it's deck, and from those 2 are chosen and placed facedown. The rest of the cards are placed on the bottom of the deck. each deck has one marked card in it - if that card would be drawn, instead the deck is shuffled.

4.2 Action

At the start of the action phase all the face down cards are turned face up.

Cards are resolved in order of the initiative value, starting with the highest. In the event of a tie, players take it in turns to choose one card at the current initiative to resolve, starting with the player with the priority marker and moving clockwise.

Card resolution consists of 3 steps: effect, movement and attack, resolved in that order.

4.2.1 Effect

If the card has a stated effect, that effect is now applied. For some effects this will modify movement or the attack or the other action, other times it just does something.

4.2.2 Movement

The frame can move up to their base movement plus the movement modifier on the card currently being resolved steps in any direction.

4.2.3 Movement between levels

It takes 2 movement to move up or down a level, and you cannot stop halfway up. Terrain that is smaller than a level can be traversed at a -1 mv penalty, but cannot be stopped inside.

4.2.4 Attack

If the card has any attack listed, one target frame within any of the ranges may be chosen. They are then the defender for this attack. If the defender has a block on their remaining cards in the same zone as any of the attacks that are in range, they must choose one of those cards to block. The attack fails and that blocking card is discarded (if its initiative hasn't been reached yet it never happens). Otherwise the attack

succeeds, and the defender takes one damage per attack mark in the corresponding zone (high/mid/low).

After finishing the attack the card resolution ends, and the card remains on the field to be used to block. (It can be helpful to turn it sideways to indicate that its been resolved)

4.3 Damage

Each frame can endure a number of hits on each zone indicated on the character card (default 4) after which they are destroyed. Destroyed frame are removed from the battlefield and can no longer contribute to the fight. Additionally any frame that has endured 2 or more damage in any location faces the following penalty corresponding to the location:

- High -1 initiative (reduce initiative on all actions by 1)
- Mid -1 cards (draw one less card to choose actions from)
- Low -1 movement (reduce base movement by 1)

4.4 Cleanup

All remaining cards on the field are discarded. Cards with the single use mark are set aside, while all other cards that were discarded are put to the bottom of their respective decks. The priority marker then moves one step anticlockwise.

5 Deck Construction

Each mobile suit must have a deck of exactly 20 cards. To construct a deck, you first choose the frame. That frame has a stats card with the following information:

- Base movement
- Faction

- Armor values at each location
- How many weapon and booster slots you have
- Frame ability (if any)

To build the deck, you can have:

- Max 4 pilot cards, all from the same pilot, no duplicates
- Max X booster cards, where X is the frame's booster count
- Your frame can choose up to N weapons. Each weapon is a set of 4 attack cards.
- For each weapon slot you can include up to 1 of each card in that weapon.
- 1 of each of the generic cards

If any card has a faction logo on it, it can only be in a deck for a frame of that faction.

So for example:

Frame	Protector Mk IV (3 weapons, 3 boosters)
3 pilot cards	bruiser 1 2 3
3 booster cards	
weapon	Stun batom 1 2 3
weapon	Shield 1 2 3 4
weapon	Rifle 1 2 3 4
2 Generics	block, dodge

6 Ability Keywords

guard break	This attack deals damage equal to its damage count minus the number of blocks consumed by it
committed	this attack is consumed after it resolves
feint	if this attack is not blocked, it deals no damage
on strike: (X)	if this attack hits (is not blocked), then X happens
flying	This frame does not spend movement to cross obstacles or move between floors. Terrain of less than 1 level height does not block LoS to or from this frame.
shield (X)	When a card with shield (X) resolves, or a frame with shield (X) starts, put X shield counters on the frame card. The next time the frame would take damage, instead remove one shield counter from the frame.
deathstrike	When this frame would be destroyed, they instead get to play one more turn, after which they are removed from play
